

KONRUT TARIM A.Ş.

ENERGY POLICY

Energy management is viewed as an integral part of operations by Konfrut Tarım A.Ş. and its subsidiaries ("Konfrut"). Processes are developed in line with energy efficiency, environmental sustainability, and operational optimization goals.

Key Principles and Actions:

- Ensuring compliance with legal regulations and international standards.
- Monitoring and analyzing energy consumption while implementing efficiency-enhancing applications.
- Tracking and improving energy performance through digital systems.
- Prioritizing high-efficiency equipment and optimizing existing infrastructure.
- Developing projects that prioritize energy efficiency across all processes, including agricultural production, transportation, and storage.
- Conducting training and awareness activities to inform employees and stakeholders about efficient energy use.
- Strengthening energy management processes through collaboration with suppliers, farmers, and relevant stakeholders.
- Regularly reviewing and implementing the Energy Policy in accordance with technological developments and legal regulations.

The energy management approach at Konfrut is shaped by the principles of digitalization, renewable energy use, and continuous improvement.
